This is a generic template designed for use by multiple journals, which includes several options for customization. Please consult the author guidelines for the journal to which you are submitting in order to confirm that your manuscript will comply with the journal's requirements. Please replace this text with your abstract.

1 | ANNOTATION DEMO SECTION

This section shows how annotation can be used for MRM revisions. LaTeX function definitions and required support libraries are provided at the top of the source file for this document. To enable/disable display of the annotations, simply uncomment the set of functions following the directions above their definitions. To highlight text that has been added in the revision, the `\add{.}` function can be used. For example, including `\add{This text has been added in the revision}` in your source will produce **This text has been added in the revision**. Similarly, to highlight text that has been deleted in the revision, the `\delete{.}` function can be used. For example, including `\delete{This text has been deleted in the revision}` in your source will produce ~~This text has been deleted in the revision~~. In cases where text is replaced in a revision, a convenience edit function is also included that combines the addition and deletion feature. For example, including `\edit{This text has been deleted in the revision}{This text`

Abbreviations: ABC, a black cat; DEF, doesn't ever fret; GHI, goes home immediately.

* Equally contributing authors.

FIGURE 1 Although we encourage authors to send us the highest-quality figures possible, for peer-review purposes we can accept a wide variety of formats, sizes, and resolutions. Legends should be concise but comprehensive – the figure and its legend must be understandable without reference to the text. Include definitions of any symbols used and define/explain all abbreviations and units of measurement.

has been added} in your source will produce ~~This text has been deleted in the revision~~ This text has been added in the revision. Finally, marginal notes indicating for which reviewer comment a modification is associated with can be include using the `\mnote{.}` function. For example, adding the following in the source file `\mnote{R2.3} \add{Information requested by Reviewer 2 in comment 3}` will produce Information requested by Reviewer 2 in comment 3.

R2.3

2 | FIRST LEVEL HEADING

Please lay out your article using the section headings and example objects below, and remember to delete all help text prior to submitting your article to the journal.

2.1 | Second Level Heading

If data, scripts or other artefacts used to generate the analyses presented in the article are available via a publicly available data repository, please include a reference to the location of the material within the article.

This is an equation, numbered

$$\int_0^{+\infty} e^{-x^2} dx = \frac{\sqrt{\pi}}{2} \quad (1)$$

And one that is not numbered

$$e^{i\pi} = -1$$

2.2 | Adding Citations and a References List

Please use a .bib file to store your references. When using Overleaf to prepare your manuscript, you can upload a .bib file or import your Mendeley, CiteULike or Zotero library directly as a .bib file¹. You can then cite entries from it, like this: [1]. Just remember to specify a bibliography style, as well as the filename of the .bib.

You can find a video tutorial here to learn more about BibTeX: <https://www.overleaf.com/help/97-how-to-include-a-bibliography-using-bibtex>.

This template provides two options for the citation and reference list style:

Numerical style Use `\documentclass[...num-refs]{wiley-article}`

Author-year style Use `\documentclass[...alpha-refs]{wiley-article}`

2.2.1 | Third Level Heading

Supporting information will be included with the published article. For submission any supporting information should be supplied as separate files but referred to in the text.

Appendices will be published after the references. For submission they should be supplied as separate files but referred to in the text.

Fourth Level Heading

*The significant problems we have cannot be solved at the same level of thinking with which we created them.*¹

Fifth level heading Measurements should be given in SI or SI-derived units. Chemical substances should be referred to by the generic name only. Trade names should not be used. Drugs should be referred to by their generic names. If proprietary drugs have been used in the study, refer to these by their generic name, mentioning the proprietary name, and the name and location of the manufacturer, in parentheses.

acknowledgements

Acknowledgements should include contributions from anyone who does not meet the criteria for authorship (for example, to recognize contributions from people who provided technical help, collation of data, writing assistance, acquisition of funding, or a department chairperson who provided general support), as well as any funding or other support information.

conflict of interest

You may be asked to provide a conflict of interest statement during the submission process. Please check the journal's author guidelines for details on what to include in this section. Please ensure you liaise with all co-authors to confirm agreement with the final statement.
